Freelance Profile Summary

Professional Flutter Mobile App Developer with **12+ production-ready applications** delivered for private clients. Specialized in building scalable, secure, and business-driven mobile apps including **restaurant systems, hospital apps, AI-powered learning platforms, e-commerce solutions**, and financial tracking applications. I partner with founders to ship fast, communicate clearly, and keep releases stable: weekly test builds, Firebase-backed reliability, and hands-on debugging of existing codebases.

Highlights

Shipped 12+ real-world Flutter apps across healthcare, e-commerce, AI learning, finance, and restaurant operations. Experienced with Firebase (Auth, Firestore, FCM), REST APIs, and clean architecture for scalable releases.

Jump into existing codebases to fix bugs, stabilize production, and deliver new features without downtime.

Professional Experience

Software Engineer – AJ Code to Cure

2024 – Present

Build and maintain production apps across healthcare, restaurant ops, and finance. Own features from UI to backend integration, ensuring stable releases and clear client updates.

- Implemented real-time ordering and status updates using Firebase/FCM.

- Optimized app performance and reduced crash sources via structured error logging.

- Collaborated with clients on weekly demos and test builds to keep scope aligned.

Selected Client Projects

Restaurant Management System

Multi-role Flutter platform including Customer App, Admin Panel, and Delivery Boy App. Features online ordering, order tracking, payments, and real-time status updates using Firebase and REST APIs.

AI-Based Kids Learning App

Intelligent learning application using Flutter with Python Keras AI model for number and alphabet prediction. Designed for early education with interactive UI and real-time feedback.

Expense Tracker & Budgeting App

Advanced personal finance app featuring budget creation, expense CRUD, early warning alerts, and weekly/monthly/yearly financial reports.

Hospital & Clinic Management App

Flutter-based hospital system with appointment booking, patient management, and admin controls integrated with backend services.

Certifications & Achievements

- Delivered 12+ production Flutter apps for clients across multiple industries.

- Firebase-focused delivery: auth, Firestore, cloud messaging, and performance tuning.

- Regularly step into existing apps to stabilize, refactor, and ship new features.

Education

BS Software Engineering – Virtual University of Pakistan

Currently in 6th Semester

Available for freelance Flutter projects – Mobile apps, APIs & full solutions
